DOCUMENT RESUME

ED 343 298 EC 300 977

TITLE	Childhood Lead Poisoning Prevention: A Resource Directory. Second Edition.
INSTITUTION	Alliance to End Childhood Lead Poisoning, Washington, DC.; National Center for Education in Maternal and Child Health, Washington, DC.
SPONS AGENCY	Health Resources and Services Administration (DHHS/PHS), Rockville, MD. Office for Maternal and Child Health Services.
PUB DATE	91
CONTRACT	MCU-117007
NOTE	95p.
AVAILABLE FROM	National Maternal and Child Health Clearinghouse, 38th and R Streets, N.W., Washington, DC 20057 (single copy free).
PUB TYPE	Reference Materials - Directories/Catalogs (132)
EDRS PRICE	MF01/PC04 Plus Postage.
DESCRIPTORS	Children; Community Education; *Community Programs; Consultation Programs; *Lead Poisoning; Medical Services; Mental Retardation; *Prevention; Screening Tests; Special Health Problems; *State Programs

ABSTRACT

This resource directory lists states and localities with childhood lead poisoning prevention programs, along with the contact person(s) for each program area (such as screening, medical treatment, paint chip testing, home inspection, and abatement.) Information is provided for 47 states (New Mexico, West Virginia, and Wyoming reported no lead poisoning prevention programs) and the District of Columbia. Appendices include: (1) tables noting the types of services offered by the state and local programs, such as screening, medical follow-up management, environmental follow-up management, temporary shelter, community education, and consultation; and (2) a list of educational materials used by state and local programs in their community education effort, arranged by state. ▪

The Alliance to End Childhood Lead Poisoning is a national educational, policy, and advocacy organization dedicated exclusively to ending the epidemic of childhood lead poisoning. The Alliance was formed in 1990 by national leaders in pediatrics, public health, environmental protection, housing, education, minority rights, and children's welfare. For more information or to update information contained in this directory, contact: Maria Rapuano, M.A., Alliance to End Childhood Lead Poisoning, 600 Pennsylvania Avenue, S.E., Suite 100, Washington, DC 20003. Telephone: (202) 543-1147. Fax: (202) 543-4466.

▪

The National Center for Education in Maternal and Child Health (NCEMCH) provides information services, educational materials, and technical assistance to organizations, agencies, and individuals with maternal and child health interests. NCEMCH was established in 1982 at Georgetown University, within the Department of Obstetrics and Gynecology. NCEMCH is funded primarily by the U.S. Department of Health and Human Services, through its Maternal and Child Health Bureau.

PREFACE

Childhood Lead Poisoning Prevention: A Resource Directory was originally compiled by the National Center for Education in Maternal and Child Health and published in January 1989. The directory has now been updated and revised by the Alliance to End Childhood Lead Poisoning, with assistance from the Childhood Lead Poisoning Prevention Training and Resource Center in Louisville, Kentucky. The latter organization is a special project of regional and national significance (SPRANS) funded by the Maternal and Child Health Bureau, Health Resources and Services Administration, Public Health Service, U.S. Department of Health and Human Services. The directory lists states and localities with childhood lead poisoning prevention activities and the contact person(s) for each program. It also provides a brief description of services offered by the state programs, along with a list of health educational materials on childhood lead poisoning that are currently available.

The information in this directory was collected through a series of telephone interviews at both the state and local levels. In the 1989 edition, 10 states (Alabama, Alaska, Montana, New Mexico, Nevada, Oregon, South Dakota, Washington, West Virginia, and Wyoming) reported no childhood lead poisoning prevention activities. In 1991, only New Mexico, West Virginia, and Wyoming still reported no such activities.

The purpose of this publication is to enhance communication among persons concerned with the prevention of childhood lead poisoning and to facilitate the development of new activities. Health care planners, administrators, and service providers responsible for developing or implementing lead poisoning prevention programs can use the information in this publication to compare existing programs, select suitable models, and seek further details through direct communication with the contact person(s) listed. The list of educational materials in this directory should be consulted before new materials are developed. The directory will also serve as a resource for organizations that provide information on childhood lead poisoning to the general public.

INTRODUCTION

Lead poisoning in children was first noted in Australia shortly before the turn of the century, but the problem received little attention in the United States until the 1920's, when its common occurrence began to be reported. In the years that followed, medical literature clearly documented both the frequency and the gravity of childhood lead poisoning in many parts of this country. Almost half a century passed, however, before any national attention was directed toward the problem. In 1970, the U.S. Surgeon General issued a statement entitled "Medical Aspects of Childhood Lead Poisoning." This set the stage for the enactment of Public Law 91-695, the 1971 Lead-Based Paint Poisoning Prevention Act which, among other things, authorized federal financial assistance to communities in developing and carrying out lead-based paint poisoning prevention activities.

Mass screening of children, public education, and other activities under the Lead-Based Paint Poisoning Prevention Act began in fiscal year (FY) 1972. For the next 10 years, these activities were funded under a categorical grant program that was administered in the initial year by the Bureau of Community Environmental Management, Department of Health, Education, and Welfare, and in subsequent years by the Centers for Disease Control. Sixty-two projects in 25 states were developed by FY 1981.

In FY 1982, with the passage of Public Law 97-35, the Maternal and Child Health (MCH) Services Block Grant Act, and the Omnibus Budget Reconciliation Act of 1981, the administrative responsibility for the prevention of lead poisoning in children was passed to the MCH program in the U.S. Public Health Service. The continuation and extension of these efforts were shifted primarily to state health agencies with access to MCH Block Grant funds for support.

Under the provisions of the MCH Services Block Grant Act, each state sets its own priorities for the use of these funds, and there has been some variation in the manner in which states have utilized these funds for lead poisoning prevention activities. Overall, screening has expanded considerably under the MCH Block Grant. Many states have begun new programs or expanded existing statewide lead poisoning prevention activities. In 1991, a survey conducted by the Alliance to End Childhood Lead Poisoning indicated that only three states have yet to develop childhood lead poisoning prevention activities.

Now after almost two decades of concerted effort at preventing this disease, many health workers have come to realize that childhood lead

poisoning is a tenacious and complex problem that does not lend itself to an easy solution. Careless and thoughtless application and disposal of this useful but lethal metal since the Industrial Revolution has scattered millions of tons of lead in our environment. Lead paint remains on millions of dwellings, and lead dust pervades our environment. As yet, modern technology offers no expedient way to clean up the many dangerous sources of lead exposure for our children. Recent mass screenings and intense public education have decreased lead encephalopathy and overt lead poisoning, but they have not eliminated the problem of undue lead absorption in children. Each year tens of thousands of children with increased levels of lead in their blood continue to be discovered by screening programs. An unknown number are not identified due to lack of screening in their communities. Even though the vast majority of children discovered by screening programs today appear to be asymptomatic, recent research has indicated that lead is toxic to the young at very "low" levels of exposure, and that subtle psychoneurological damage at such level is not usually clinically apparent. Health workers must therefore remain vigilant over this treacherous disease and continue their efforts in public education and early identification of children at risk.

Originally published in 1989, this resource directory has now been updated by the Alliance to End Childhood Lead Poisoning in response to the need for information about current state and local activities in childhood lead poisoning prevention. The Maternal and Child Health Bureau is pleased to provide funding for this important undertaking. The elimination of childhood lead poisoning is a complex task that requires dedicated and coordinated efforts by health, housing, environmental protection, and other agencies at the federal, state, and local levels. Despite significant progress made in recent decades, the elimination of this preventable disease among children remains a goal yet to be achieved. It is hoped that this resource directory will contribute to the achievement of this goal.

EDUCATIONAL MATERIALS USED BY STATE AND LOCAL PROGRAMS

Listed below are the educational materials used by state and local programs in their community education efforts. The individual programs should be contacted for information on the availability of these materials (addresses and phone numbers can be found in the first section of the directory).

The Alliance to End Childhood Lead Poisoning is also a source of educational materials. *What Everyone Should Know About Lead Poisoning* (Channing L. Bete Co.), *What You Should Know About Lead-Based Paint in Your Home* (U.S. Consumer Product Safety Commission), *CPSC Warns About Hazards of "Do-It-Yourself" Removal of Lead-Based Paint* (U.S. Consumer Product Safety Commission), and *You Can Prevent Childhood Lead Poisoning* (Rhode Island Department of Health) are currently available. For copies contact the Alliance, 600 Pennsylvania Avenue, S.E., Suite 100, Washington, DC 20003, (202) 543-1147.
